

✓ How to work with Web Objects

Best Practices for web objects identifications
Object locators and strategies

Objects on a webpage have properties
Some of these properties are unique like ID

Object locators are created using these properties

XPath, CSS etc

Katalon Studio takes care of creating the best object locators

Multiple locators are captured and stored

You can manually change locators in Katalon Studio

`//tagname[@attribute='value']`

`//input[@name='q']`
